DETAILED ACTION

Response to Amendment

1. In regard to the amendment filed 5/6/03, all necessary changes to the claim and specification have been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-24 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
5. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over

In regard to claims 1-3, 10-11, 13-16, and 23, Mucci et al. (hereinafter "Mucci") teaches an ultrasound method for automatically determining a transmitter power level (col. 9, line 57 - col. 10, line 13) comprising the steps and structures for determining a noise level or an excess signal-to-noise ratio with a processor (24); determining a lowest value of a display dynamic range (col. 8, line 17 - col. 9, line 9). Mucci fails to mention specifically that the transmitter power level or power reduction factor is determined as a function of the noise level and the lowest value or as function of the excess power. Mucci, however, teaches in Fig. 7, a method for determining amplitude as a function of noise level. It would have been obvious to an ordinary skill in the art at the time the invention was made to recognize that the amplitude defines the transmitter power level of the ultrasound signal for imaging an object. The motivation for determining transmitter power level as a function of noise level is to provide ultrasound image with higher resolution.

In regard to claims 5-9, 17-22, and 24, the specific limitations of the steps of iterative reduction of transmit power; determining the difference between a first signal at a default power level and a second signal at a power level responsive to the iterative step; acquiring a plurality of receive samples with transmitter off; etc. would be obviously taught by the method of automatic transmitter power determination of Mucci.

In regard to claims 4 and 12, Mucci teaches the steps and structures for automatic gain control (col. 3, line 55-56).
